

generating step to each communication device.

63. A recording medium for storing a processing program related to seating-order determination in a seating-order determination device provided for a communication system having at least three communication devices, the processing program comprising:

a seating-order-information generating step of generating seating-order information at each point of time for information sent from each communication device; and

a transmitting step of sequentially transmitting the seating-order information generated in the seating-order-information generating step to each communication device.

64. A recording medium according to Claim 63, wherein the processing program further comprises a receiving step of receiving attention-degree information indicating the degree of attention which the user of each communication device pays to the information sent from each communication device; and

in the seating-order-information generating step, the seating-order information is generated according to the attention-degree information received in the receiving step.

65. A recording medium according to Claim 64, wherein

TOP SECRET - SOURCE 650

the degree of attention is determined according to user-behavior detection information or information specified by the user.

66. A recording medium according to Claim 65, wherein the user-behavior detection information includes user-sight-line detection information.

67. A recording medium according to Claim 65, wherein the user-behavior detection information includes user-face-direction detection information.

68. A recording medium according to Claim 63, wherein the processing program further comprises a receiving step of receiving attention-degree information indicating the degree of attention which the user of each communication device pays to the information sent from each communication device; and

in the seating-order-information generating step, the information sent from each communication device is grouped according to the attention-degree information received in the receiving step, and the seating-order information is generated according to the result of grouping.

69. A recording medium according to Claim 68, wherein,

TOP SECRET//NSC//EYES

in the seating-order-information generating step, the seating-order information is generated such that information belonging to the same group is arranged.

70. A recording medium according to Claim 68, wherein, in the seating-order-information generating step, the seating-order information is generated such that information belonging to the same group is dispersed almost uniformly.

71. A recording medium according to Claim 68, wherein the grouping is performed according to the statistical relationship between a group structure and the degree of attention which the user of each communication device pays to the information sent from the other communication devices.

72. A recording medium for storing a processing program related to communication in a communication device of a communication system including at least three communication devices communicating with each other, the processing program comprising:

a receiving step of receiving information and seating-order information sent from other communication devices;
an attention-degree-information generating step of detecting the degree of attention which the user pays to the information sent from the other communication devices to
